

Bb Cornet, Bell: Gold brass bell, 119.0mm (4-2/3"), Bore: ML 11.65mm (0.459"), Finish: Silver-plated, Mouthpiece: CR-11E4

A new design for our long-term student cornet which includes a newly designed rounded leadpipe, in combination with an ML-bore, offers the typical cornet sound with a very easy response. Also the modified two-piece gold brass bell with ideal thickness enables the player to create a round and warm tone.

## Features

### New piston, piston caps and buttons

Highly durable monel alloy pistons as well as newly designed piston buttons and bottom caps help lengthen the life of the instrument while also maximizing sound quality.

## Features

### New tuning slides

The 2nd and main tuning slides are produced using the same method as high-end Yamaha models, which provides stability, a more refined tonal color and added durability.

### Bore size and lead pipe

The redesigned rounded leadpipe and ML (medium-large) 11.65mm (0.459") bore give this instrument a smooth and light response and a warm tone quality.
